

FORMTEK METAL FORMING, INC.

B&K, A Member of the Formtek Group Delivers Flexible Door Framing System in New York

The 2DFR Supermill® from B&K is a highly flexible metal door frame roll former, designed to manufacture a wide range of metal door frame profiles without changing the roll tooling. B&K 2DFR Supermill® System utilizes our patented technology to provide the ability to adjust for material gauge and the profile dimensions. It is capable of producing metal door frames for a wide range of installations. The abilities of the Supermill® design to roll form with pre-cut strips enables manufacturers to upgrade from the labor intensive process of press brake forming while maintaining their turret punched blanks. See www.bkformtek.com or call us at (216) 292-4460 for more information.
